

DIODE KIT FOR METRIC BIKES

4709

FITS: FOR USE ON METRIC CRUISERS WITH A SINGLE TURN SIGNAL INDICATOR BULB USING L.E.D. TURN SIGNALS IN PLACE OF THE STOCK INCANDESCENT TURN SIGNALS

PART#	INCLUDED
404709	1 Diode/Wire Assembly
404709W	1 6" Ground Wire – Black
304709	1 Instruction Sheet

NOTE

We recommend installer solder and heat shrink all connections

PROCEDURE

STEP 1 Disconnect the battery.

STEP 2 Locate turn signal indicator bulb and the two wires attached to it. Some disassembly of the dash or other components may be needed to expose the wires. Consult a service manual for these procedures if necessary. Cut both wires in a location providing both adequate room to work and wire length to make your splices.

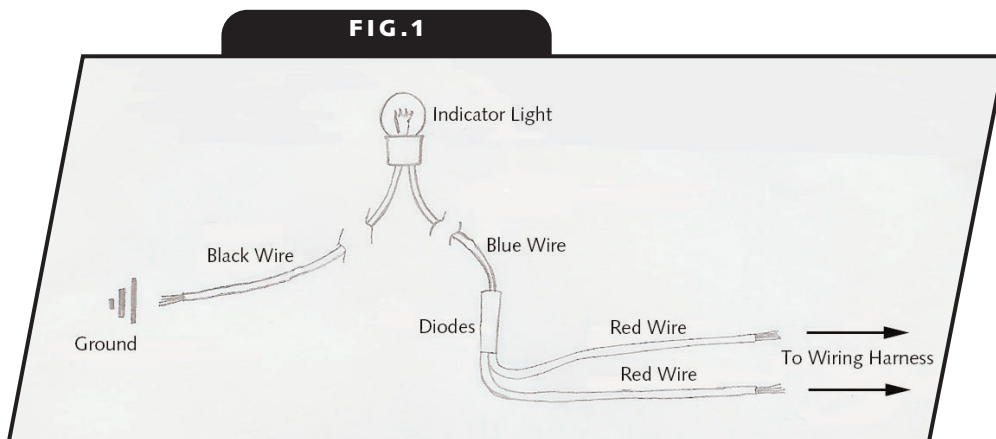

STEP 3 Select one of the wires from the indicator bulb, it makes no difference which one you choose, and run it to ground. A 6" length of wire has been provided in case additional length is needed.

STEP 4 Take the remaining wire from the indicator bulb and splice it to the blue wire on the diode assembly.

STEP 5 Take the two wires coming from the bikes wiring harness and splice one to each of the red wires on the diode assembly.

STEP 6 Reconnect battery and verify proper turn signal operation. Tuck wires neatly away and reassemble any components removed to gain access to the turn signal indicator wiring.

Ride On!
